

Missouri shows a videotape advertising the program to new parents in the hospital before they take their baby home. In a 1990 *St. Louis Dispatch* article, Mildred Winter of the Parents as Teachers National Center at the University of Missouri at St. Louis said, "Some of our parent educators follow expectant women around the supermarket so they can ask them whether they know about the program."

The federal government isn't the only source of funds. Some of the supporters of the Parents as Teachers program include but are not limited to The Ford Foundation, The Carnegie Foundation, The Danforth Foundation, New World Foundation, Edna McConnell-Clark Foundation, The Rockefeller Foundation, and the Pet Corporation. There are also The A.P. Green Foundation, The Kansas City Association of Trusts and Foundations, Maritz, Inc., The Monsanto Fund, Don Orscheln, The Powell Family Foundation, and The Speas Foundation. In Missouri we check off a little box when filing income tax directing money to The Children's Trust Fund, another means of funding.

Other federal monies come through the Handicap Law, also known as P.L. 94-142. It may be in the interest of a "certified parent educator" to identify a normal child with the "newspeak" label "developmentally delayed" to initiate the flow of these funds. So should we be shocked that teachers admit the fact that certain tests are rigged to show that up to 75 percent of the normal population of children are abnormal? (Davis Gillam, a teacher who ran the "handicapped" education program in Potosi, Missouri, for many years, left

the system last year because her conscience would not allow her to continue to brand normal children as "developmentally delayed.") Or that a Missouri Department of Education publication reveals that social workers may choose to "rate selected aspects of the child's social development" without any public accountability for the results?

Parents as Teachers won't be fully implemented until 1995. Until then, the Parents as Teachers program is using "nice grandmothers from local churches"—as Missouri Secretary of State Roy Blunt put it—for home visits and screening, while certified educator parents are being trained at the Danforth Foundation's Teachers Preservice Institute. The Institute is recruiting people already working in child care centers to accredit them as "certified parent educators," who will soon take over the program. They will also assume for many families the primary parenting role. As Carolyn Warner, the Arizona Superintendent of Public Instruction, told the *Arizona Herald* in 1975, "Those who educate are more to be honored than those who bear the children. The latter gave them only life, the former teach them the art of living."

*Laura Rogers lives in St. Charles, Missouri, where she founded the St. Charles Christian School, which operated for twenty years. She was a lobbyist for the Missouri home school law, which has been used as a model nationally, is a Moore Foundation research associate, and is the mother of six.*

## Restoring Island Park

by John Baden, Ramona Marotz-Baden, and Ron Cooper

### A Public/Private Trust for Wilderness Management

The great Yellowstone caldera, home to Old Faithful and Mammoth Hot Springs, last exploded some 600,000 years ago. With a power more than one thousand times greater than Mt. St. Helen's, it threw boulders the size of Greyhound buses nearly to Kansas. Pressure is building up again. The Yellowstone caldera is bulging in preparation for another explosion, which will probably occur sometime between tomorrow and fifty thousand years from now.

In the meantime, we have the task of repairing damage of another sort—that brought about by an agency of the United States government, the Forest Service, in the western boundary area of Yellowstone Park. Restoration ecology provides the tools.

The Island Park caldera area of Fremont County, Idaho, has trophy trout rivers and spectacular views of the Grand Tetons. Unfortunately, the natural beauty of this area is being despoiled at taxpayer expense. Americans are subsidizing the destruction of an increasingly cherished environment.

Beginning in 1961, increasing in the 70's, and accelerating to unsustainable levels during the 80's, the Forest Service

George Weurhner

*The clearcuts on Forest Service land are evident here at the border of Yellowstone National Park and the Targhee National Forest in Idaho.*

liquidated the timber resources of Island Park. Their justification was a pine bark beetle infestation. The Forest Service deviated from a stated policy of sustained yields and increased timber harvest levels to upwards of 76 million board feet of timber per year—levels far in excess of what the area can grow on a sustained basis. And as clear-cut areas grew, the micro-climate of the area changed.

The trees of the entire Island Park area east of the Snake River and up to the Yellowstone Park boundary have been liquidated. One result has been a great decline in the wildlife population. Fremont County once had the longest continuous elk hunting season in Idaho. For a hundred years this elk hunt was characterized by trophy bulls and healthy cows. As clearcutting swept the area, the season was shortened. Then, as logging continued, the harvesting of cow elk was prohibited. What had been a 44-day hunting season in the 1960's has become a five-day hunt for bulls only, with a disproportionate share of those bulls being less than breeding age. As logging draws to a close, even these restrictions may be inadequate. The bull-to-cow ratio, which measures overall population health, continues to decline. There are, essentially, no resident herds in the Island Park area. The elk being shot are migrants from Yellowstone Park.

Trees grow best in warm, moist places with low elevations and long growing seasons. Island Park, however, is at a high elevation characterized by hot, dry, short summers and long cold winters. There is little that can be done to stimulate the low timber productivity of the Targhee National Forest, or, for that matter, of any forest in the Yellowstone region.

The excessive timber harvest in Island Park has severely depressed the ecological values of the whole area. While it provided a short-term boost in timber jobs, the long-term economic base of many of the county's residents has been harmed. The artificial twenty-million-dollar-per-year timber industry now faces collapse. By accessing increasingly marginal timber and accepting greater environmental damage, Island Park's two major mills can remain in operation for a few more years. The stud mill in St. Anthony, which consumed lodgepole pine at a voracious

rate to make 2x4's, is likely to close within the year. The major dimension lumber mill in Rexburg, 15 miles farther south, has only a few more years to go. Likewise, continued emphasis on large mills could doom the far more labor intensive house log industry and smaller mills of the area.

If the region is to prosper, other economic activities must be pursued. Fortunately, the expanding interest Americans have in high quality natural environments and outdoor recreation provides a potential economic opportunity. Nearby West Yellowstone, Montana, has a history similar to Island Park's, but enjoys prosperity based upon the natural environment. This success story provides both hope and a model for applying restoration ecology.

Starting just after World War II and through the late 1960's, West Yellowstone's economy was dominated by timber. Unprocessed logs were shipped as far as the upper Midwest to be made into paper. But as in the Island Park area, the extensive timber harvests could not be sustained. When a local mill was consumed by fire, the company decided against rebuilding, at least partially because of the inadequacy of the long-term timber supply.

Today, West Yellowstone has largely abandoned timber as a base for its economy. The community has found it can prosper by emphasizing resource protection, rather than resource extraction.

West Yellowstone has become a successful gateway community to Yellowstone Park as well as a recreational center in its own right. The area has capitalized on the growing enthusiasm of Americans for wild trout by becoming a world-class center for fly-fishing. Recently the North American Trout Foundation moved its headquarters to West Yellowstone, drawing thousands of anglers to its annual convention. In the winter thousands more visit the area to go snowmobiling and cross-country skiing. The American Dog Derby races held in Ashton from 1921 through the late 1940's have moved to West Yellowstone. These activities have given it one of the most robust economies in the region.

Therein lies the economic opportunity for Island Park and adjacent areas. The rapidly changing cultural and economic trends in America that have

helped West Yellowstone can also help southern Idaho. As Americans become increasingly concerned about the quality of their environment, their appreciation grows for places where the natural environment is healthy and intact. Eastern Idaho offers numerous opportunities to meet this growing interest. But the ecological restoration of Island Park is critical to its transition to a sustainable and environmentally protective economy.

To be effective, environmental restoration efforts must link ecological concerns with appropriate incentives. The bifurcated management of the Forest Service and the National Park Service has threatened both the environment and the economic health of the region. In addition, federal land management allows little meaningful local involvement in decisions affecting both the ecological and the economic health of the region.

Current federal land management is based upon political calculations decoupled from any long-term considerations. We need new institutional arrangements providing strong incentives to act responsibly towards the environment while pursuing economic interests. Businesses that depend upon scenic beauty, wildlife, and clean air and water are more likely to consider the short- and the long-term effects on the region's ecological resources than are federal agencies that depend upon congressional appropriations.

With the proper type of stewardship arrangements, even mining, extraction, energy, and timber harvests can be made compatible with the long-term maintenance of environmental quality. Such a stewardship must recognize that decisions made in a political arena far removed from the region tend to be made in accord with political expedience and perceived acceptability. Thus political decisions fail to consider either the ecological or economic considerations critical to long-term vitality of a region. We must remove management decisions from the realm of special interest politics, with its inherent bias toward the short term.

One such management solution for the Island Park area is the creation of the Island Park Ecological Endowment Board. The proposed Ecological Endowment Board is a public, nonprofit corporation with a trustee responsibility

for restoration of the area. It would have the obligation to manage in a manner that enhances the ecological integrity of the area while providing opportunities for sustainable businesses.

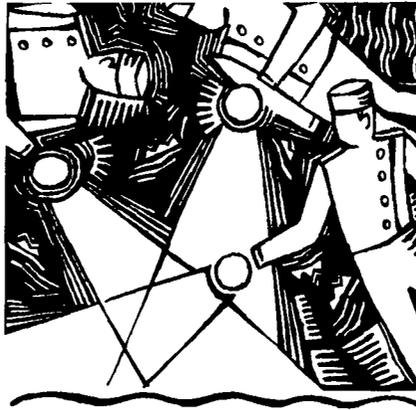

Think of this board as a public interest foundation representing both local and national interests. It would build on more than eight hundred years of common law experience with trust relationships involving colleges, hospitals, and museums, extending this well-established framework into a new ecological arena. (Local and national land trusts such as the Nature Conservancy have already provided a model for restoring abused ecosystems like Island Park.) This new management would operate under a congressional directive. It would combine elements of the new federalism embodied in the Northwest Power Planning Act, and a board of trustees such as that responsible for overseeing the Smithsonian Museum and Colonial Williamsburg.

America's Founding Fathers and our first foreign chronicler, Alexis de Tocqueville, well understood that no single set of institutional arrangements is appropriate for all tasks. Profit and loss oriented corporations, by their very nature, give their managers incentives to discount costs and benefits not immediately reflected on the balance sheet. Elected politicians and governmental bureaucrats are notoriously shortsighted and provincial in their outlook, discounting results beyond the next election and impacts outside their jurisdiction. But the nonprofit public interest corporation we propose, the Island Park Ecological Endowment Board, can be carefully designed to avoid incentives that give rise to the above pathologies and to maximize the restoration of Yellowstone's ecological heritage.

## FILM

Jeanne Berg

### Playing With Wickedness

by David R. Slavitt

#### Henry and June

Screenplay by Philip Kaufman and Rose Kaufman

Directed and produced by Philip Kaufman

Released by Miramax

#### Tune in Tomorrow

Screenplay by William Boyd

Directed by Jon Amiel

Produced by John Feidler and Mark Tarlov

Released by Cinecom Entertainment

#### Reversal of Fortune

Screenplay by Nicholas Kazan

Directed by Barbet Schroeder

Produced by Edward R. Pressman and Oliver Stone

Released by Warner Brothers

There is a certain rightness to the way it turned out, with *Henry and June* being the first movie to get the new "NC-17" rating (which means that no children under the age of 17 are admitted, parents or guardians or no). But any grown-ups above the age of 22 or so should be warned away, which leaves the film with a very narrow spectrum for its tepid appeal. There is lots of writhing and lots of declamation, and we are reminded in both instances how sublimely stupid Henry Miller and Anaïs Nin were. Legends, admittedly, but their actual

accomplishments were miniscule, just as their ruttings seem now diminished by the passage of time. Flower children *avant la lettre*, they spent a great deal of energy posturing and, in a weird way, were successful at it. Posturing, as Andy Warhol was later to demonstrate, can outweigh achievement and is eleven points in publicity's law. Miller and Nin were in the right place at the right time, with just the right dopey earnestness to take in those literary journalists whose mistakes became the historians' truths. The books of both were dreary and their lives were impossibly tedious.

I found myself, therefore, admiring *Henry and June* for the first twenty minutes or so. Fred Ward's Henry Miller is impressively crude and lunk-headed. He and his wife (Uma Thurman is June Miller) speak with a heavy Brooklyn accent that makes their goofy comments even goofier: "You were supposed to be a Dusty Yevsky!" she complains, and I thought it was hilarious and that the movie was distancing itself from its subject—a bold, unusual, and therefore interesting thing to do. But that expectation of mine turns out to have been either delusional or else they toyed with it and then gave it up for the surer rewards of a quasi-respectable or at least pretentious soft-core romp. Soft-core pornographers have better sense, though, and don't intersperse their gropings with long sequences that attempt to make interesting what is clearly the most boring human activity in the universe to watch—somebody typing. We see Henry Miller typing what will one day become *Tropic of Cancer*, and we watch him do this with his hat on, his hat off, his ashtray empty, and his ashtray full. We see him pull a sheet of paper out of the typewriter and read it with dissatisfaction; we see him flick a large cockroach off the top of a pile of completed manuscript pages; we see him pull another sheet of paper out and read this page with pleasure (which page, we wonder, might this have been?).

Every two or three hours I would look at my watch to see that another few minutes had elapsed. Without the pressures of censorship—which is what gave the Tropics an almost purely extrinsic interest—there is precious little left. Stupid remarks about writing and art do not justify or redeem even
